Status: Current Operational Profile

About Us

Asterix the Long Firefighting Dog NPC – Fire & Emergency Support Service is a stand-alone, registered Non-Profit Company dedicated to providing professional fire, rescue-support, emergency support, and first-responder services within its operational area.

The organisation operates independently as a dedicated Fire & Emergency Support Service, with its own leadership structure, operational procedures, communications systems, response capability, training standards, and emergency coordination processes.

Asterix NPC provides rapid operational support to communities, businesses, landowners, municipalities, institutions, and emergency stakeholders through early intervention, scene safety, fire suppression support, rescue support, first-responder assistance, communications coordination, and multi-agency cooperation.

The organisation is a dedicated first responder for AURA, NAMOLA, and iER, and forms part of the E2 Initiative. Asterix NPC actively supports inter-agency cooperation, radio interoperability, and coordinated emergency communication within the emergency response environment.

Asterix the Long Firefighting Dog NPC is not a municipal fire brigade, ambulance service, law-enforcement agency, or statutory emergency authority. Its function is to operate as a professional Fire & Emergency Support Service, providing fire, rescue-support, emergency scene support, and first-responder assistance until the appropriate emergency services arrive or take over.

Where the Name Comes From

The name “Asterix the Long Firefighting Dog” is more than a title — it is a legacy of loyalty, courage, and perseverance.

It honours Asterix, the beloved dog and loyal companion of Jaco and Ruchelle Rautenbach, whose strength, determination, and unwavering spirit inspired the values that guide the organisation today: service, protection, resilience, and dedication.

Asterix’s name lives on through the NPC and the equipment range that carries his name — a tribute to standing firm in the face of danger and protecting others when it matters most.

Asterix lives on — stronger than ever.

Who We Are

Asterix the Long Firefighting Dog NPC is a professionally managed Fire & Emergency Support Organisation dedicated to protecting lives, property, and the environment through rapid response, operational discipline, responsible incident support, and strong community partnership.

As a registered Non-Profit Company, the organisation exists to strengthen emergency response capacity and community resilience through professional fire suppression support, rescue support, incident support, public education, technological innovation, and cooperation with emergency stakeholders.

The organisation is built on five core pillars:

- Professional Leadership
- Operational Readiness
- Continuous Training
- Advanced Communications & Technology
- Community Service

Every member of the organisation is committed to maintaining professionalism, integrity, accountability, responder safety, and operational readiness in every deployment.

Operational Area

Asterix the Long Firefighting Dog NPC is based in Tzaneen, Limpopo, and primarily serves the Greater Tzaneen and Greater Letaba areas.

Operational support may extend beyond these areas when requested through recognised emergency networks, partner organisations, institutions, Fire Protection Associations, or mutual-support arrangements, subject to operational availability, safety considerations, and available resources.

Scope of Service

Asterix NPC provides fire, rescue-support, emergency scene support, and basic first-responder assistance. The organisation does not operate as a municipal fire brigade, ambulance service, law-enforcement agency, or statutory emergency authority.

All services are provided within the organisation's training, equipment, safety protocols, operational capacity, and applicable legal framework.

Expanded Core Focus Areas

The NPC provides fire and emergency response support across a broad and expanding operational scope.

Firefighting Operations

- Structural firefighting
- Veld and forest firefighting
- Fire suppression support and scene stabilisation
- Wildfire support operations and fire-line assistance
- Emergency standby during high-risk fire conditions
- Support during fire-related incidents affecting communities, farms, properties, roads, and infrastructure

Motor Vehicle Incident Support

- Scene safety and hazard control
- Fire risk mitigation
- Vehicle fire suppression
- Road hazard management
- Traffic scene support
- Initial patient support within first-responder scope
- Coordination with ambulance services, towing services, SAPS, and other emergency stakeholders

Rescue & First Responder Support

- Scene safety and hazard management
- Initial emergency scene support
- Basic Life Support and first aid procedures
- Patient stabilisation until ambulance services arrives
- Support during remote-area emergency incidents
- Emergency access support using appropriate equipment within operational scope

The NPC is not an ambulance service and does not provide patient transport or advanced medical care. Its primary function is fire, rescue support, scene safety, and emergency response support until the appropriate emergency services take over.

Fire Safety Awareness & Education

- Pre-school and primary school fire-safety programmes
- Practical fire-safety lessons
- Asterix Fire Safety Colouring Book in English and Afrikaans
- Community fire awareness initiatives
- Public safety warnings and community education

Emergency Communications & Dispatch Centre	Operational
Community WhatsApp emergency reporting group	Operational
Halo Dual-Band PTT communications	Operational
VHF fire communications	Operational

Capability	Status
iER communication integration	Operational
OCC Limpopo radio and WhatsApp coordination	Operational
ICASA-registered Airband communications	Operational
Ground-to-air and air-to-ground support	Operational
Route and traffic-flow situational awareness monitoring	Operational
ANCO skid units	Operational
Scene lighting and search lighting	Operational
Road safety and traffic-control equipment	Operational
Medical jump bags within first-responder scope	Operational
E2 Initiative participation	Active
AURA / iER / NAMOLA first responder status	Active

First Responder Integration & Dispatch

The NPC operates as a dedicated first responder organisation integrated with:

- AURA
- NAMOLA
- iER (Integrated Emergency Response)

All emergency activations are coordinated through a dedicated 24-hour emergency line, ensuring rapid activation, structured communication, and effective incident coordination.

24-Hour Emergency Line: 015 590 8911

The organisation also operates a dedicated community emergency WhatsApp group, allowing the public to:

- Report incidents and emergencies
- Receive emergency warnings and safety alerts
- Stay informed regarding ongoing incidents and hazards within the operational area
- Improve community-based incident reporting and early warning

This community-linked reporting structure assists with faster information flow, improved situational awareness, and more effective emergency response coordination.

Emergency Communications & Dispatch Centre

Asterix the Long Firefighting Dog NPC operates a dedicated Emergency Communications & Dispatch Centre responsible for receiving emergency reports, coordinating activations, monitoring communication networks, maintaining situational awareness, and supporting operational deployments.

The Dispatch Centre supports the organisation's 24-hour emergency response capability through:

- The dedicated 24-hour Emergency Line: 015 590 8911
- Community Emergency Reporting & Alert WhatsApp Group

- AURA, NAMOLA, and iER first responder activations
- Halo Dual-Band Push-to-Talk communications
- VHF fire communication channels
- iER communication integration
- OCC Limpopo radio and WhatsApp communication coordination
- ICASA-registered Airband communications
- Traffic-flow and route-monitoring systems
- Large-screen situational awareness monitoring
- Operational resource coordination
- Incident logging and communication records
- Public warnings, safety alerts, and incident updates where appropriate

Dispatch duties are shared on a rotating basis between members of the Executive Leadership and Management Team. This ensures that emergency communications, incident reporting, community alerts, and operational coordination remain actively monitored and professionally managed.

The Dispatch Centre plays a central role in improving response times, supporting inter-agency coordination, and ensuring that information reaches responders as quickly and accurately as possible.

These systems are used strictly for emergency communication, coordination, dispatch support, and situational awareness. They do not replace official emergency services, law-enforcement systems, traffic management systems, or municipal control centres.

Communications & Dispatch Capability

The NPC operates a dedicated communications and emergency coordination system designed to support rapid activation, effective incident reporting, and multi-agency interoperability.

Emergency communication platforms include:

- Halo Dual-Band Push-to-Talk (PTT) radio systems
- VHF radio communication systems
- iER integrated communication channels
- OCC Limpopo radio and WhatsApp communication coordination
- Dedicated 24-hour emergency communications
- Community emergency reporting and alert systems
- ICASA-registered Airband communication capability
- In-vehicle Wi-Fi for operational communication and incident coordination

The organisation's communication systems allow for:

- Rapid incident activation
- Real-time operational coordination
- Emergency incident reporting
- Public safety alerts and warnings
- Inter-agency communication and situational awareness
- Wildfire and aerial operational coordination
- Operational resource coordination

The NPC actively supports communication interoperability and coordinated information sharing between emergency stakeholders, first responders, support organisations, fire protection structures, aerial firefighting resources, and community role players.

Faster information flow enables faster activation, improved coordination, and more effective emergency response.

Where shared or interoperable communication channels are available, the organisation welcomes collaborative communication in the interest of public safety and community protection.

Situational Awareness & Route Monitoring

To improve operational awareness and incident detection capability, the organisation utilises selected web-based monitoring platforms within its dispatch environment.

These systems assist with:

- Monitoring traffic flow on major routes within the Greater Tzaneen and Greater Letaba operational areas
- Identifying abnormal traffic slowdowns or congestion
- Improving situational awareness during emergencies and high-risk incidents
- Supporting faster incident recognition and operational response coordination

Relevant route and traffic information is displayed on dedicated large-screen dispatch monitors to support real-time operational decision-making and emergency coordination.

These systems are used strictly as situational-awareness and dispatch-support tools and do not replace official traffic management, emergency reporting, or law-enforcement systems.

Operational Radio Identification & Interoperability

To support structured communication, coordinated incident management, and inter-agency interoperability, the organisation utilises both functional and individual operational call signs during emergency incidents and activations.

Functional Operational Call Signs

- Asterix Fire Dispatch — Main communications and dispatch coordination
- Asterix Fire Alpha — Primary response / incident command radio
- Asterix Fire Bravo — Operational response member radio
- Asterix Fire Charlie — Operational response member radio

These functional call signs are assigned according to operational radio allocation and may change between personnel depending on the deployment, radio assignment, and operational requirements of the day.

Individual Operational Call Sign

- PITBULL — Jaco Rautenbach, Founder, Managing Director & Fire Chief

The Fire Chief utilises the personal operational call sign PITBULL, while other personnel generally operate using the functional call sign assigned to the radio they are carrying during that deployment.

These identifiers assist with communication clarity, incident coordination, operational accountability, multi-agency interoperability, and structured emergency response operations.

The organisation is additionally available on:

- Haenertsburg VHF Fire Channels
- Letaba FPA VHF Fire Channel

This supports improved wildfire coordination, situational awareness, and communication interoperability between fire protection stakeholders, emergency responders, and emergency support organisations operating within the region.

Airband Communication Capability

The organisation operates a fully operational and ICASA-registered airband radio communication system to support air-to-ground and ground-to-air communication during wildfire, emergency support, remote-area incidents, and coordinated aerial operations.

This capability enhances:

- Situational awareness
- Wildfire air-ground coordination
- Aerial search and rescue support
- Communication with aerial firefighting resources
- Coordination during remote-area emergency operations
- Assistance with aircraft landing coordination in remote operational areas
- Multi-agency interoperability and operational communication efficiency

The system is utilised strictly in support of coordinated emergency and wildfire operations and forms part of the organisation's broader communication, rescue-support, and incident-management capability.

Operational Standards and Compliance

The NPC operates:

- In alignment with the principles and operational standards of the Fire Brigade Services Act, 1987 (Act No. 99 of 1987)
- Under the National Veld and Forest Fire Act, 1998 (Act No. 101 of 1998) as a private, non-profit fire and emergency support organisation

The organisation maintains active membership with:

- South African Emergency Services Institute (SAESI)
- Fire Protection Association of Southern Africa (FPASA)

Strict operational standards are enforced, including:

- Incident logging and Occurrence Book records
- Certified PPE usage
- Safety, communication, and reporting protocols
- Operational accountability and responder discipline
- Structured dispatch and communication procedures
- Continuous readiness and equipment checks

The NPC operates with a dedicated core team and does not utilise volunteers, ensuring consistent training standards, accountability, professionalism, and operational control.

Training & Operational Qualifications

Asterix the Long Firefighting Dog NPC believes that professional emergency response begins with professional training. The organisation places a strong emphasis on continuous learning, practical experience, and operational competency to ensure every response is safe, effective, and professionally managed.

The organisation's leadership and operational members hold recognised qualifications and competencies including:

Firefighting

- Firefighter Level 1
- Firefighter Level 2
- Firefighter Level 3
- Structural firefighting
- Veld and forest firefighting
- Initial Attack Fire Suppression
- Extended Attack Fire Suppression
- FireBoss Level 1
- FireBoss Level 2

Fire Management & Incident Command

- Fire Risk Management
- Incident Command & Management
- Managing Disaster Fires
- Planning for Prescribed Block Burning of Natural Areas

Medical First Response

- Basic Life Support
- First Aid Procedures
- SAQA Unit Standard 119567: Provide Basic Life Support and First Aid

Emergency Communications

- ICASA Aviation Radio Operator's Licence
- Air-to-ground and ground-to-air communications
- Halo Dual-Band Push-to-Talk communications
- VHF fire communications
- Multi-agency radio interoperability

Training remains an ongoing organisational priority, with members regularly participating in refresher training, practical exercises, operational simulations, and continuous professional development to remain aligned with current firefighting practices, emergency response procedures, and technological advancements.

Professional Standards

Asterix the Long Firefighting Dog NPC is committed to delivering professional Fire & Emergency Support services through disciplined leadership, recognised training, advanced technology, modern communications, and continual investment in equipment and operational capability.

The organisation believes that effective emergency response depends on prepared people, reliable equipment, strong communication, cooperation between emergency stakeholders, and a disciplined approach to safety and accountability.

Every response is guided by professionalism, integrity, responder safety, accountability, and a commitment to continuous improvement.

As a registered Non-Profit Company, the organisation exists to strengthen community safety through professional fire suppression support, rescue support, first-responder assistance, public education, and cooperative emergency response.

Operational Equipment & Response Capability

The NPC's response vehicles are equipped to support a wide range of fire and emergency incidents through professionally selected operational equipment, advanced communications systems, and scene-support capability.

Operational equipment includes:

- Professional-grade ANCO firefighting skid units
- Firefighting hoses, nozzles, and suppression equipment
- Firefighting chemicals and suppression agents
- Medical jump bags and first-responder support equipment
- High-powered scene and search lighting systems
- Rescue scene flood lighting systems
- Chainsaws for emergency access and fire operations
- Reciprocating rescue saws equipped with specialised vehicle rescue blades
- Emergency access and scene-support tools
- Road safety and traffic-control equipment
- Advanced Halo Dual-Band PTT and VHF communication systems
- In-vehicle Wi-Fi systems for operational communication and incident coordination

Response vehicles are additionally equipped with:

- 2 complete rescue scene lighting systems
- 4 floodlights producing approximately 3,800 lumens each
- High-powered spotlights for search operations and scene illumination
- 10 road traffic cones for scene safety and hazard management
- 2 aluminium firefighting beaters for wildfire suppression support

The organisation currently utilises MTN-powered in-vehicle Wi-Fi systems, selected for strong network coverage throughout the Greater Tzaneen and Greater Letaba operational areas.

The NPC continuously upgrades and improves its operational capability to ensure safe, effective, professional, and reliable emergency support.

Funding and Support

Asterix the Long Firefighting Dog NPC operates as a professional Non-Profit Fire & Emergency Support Organisation, with all available resources directed toward operational readiness, responder safety, training, communications infrastructure, equipment maintenance, and community protection.

The organisation is supported through:

- Emergency response network participation
- Public and community donations
- Sponsorships and operational support contributions
- Service-related cost recovery where applicable

This support enables the NPC to maintain a high operational standard, making use of advanced equipment, modern communications technology, professional-grade firefighting systems, and continuous responder training.

As a Non-Profit Company, all resources are applied toward strengthening emergency response capability, improving community safety, maintaining equipment readiness, and supporting the organisation's public-benefit mission.

The organisation is committed to maintaining professional operational standards, responder discipline, financial responsibility, and effective emergency support capability at all times.

Standby Readiness

Fire Danger Index – FDI

The NPC's FDI-based readiness schedule applies specifically to veld and forest fire operations and is guided by the South African Fire Danger Index issued by the South African Weather Service.

- Blue & Green Days — No standby
- Yellow Days — On standby
- Orange Days — Ready to deploy
- Red Days — Full response mode

FDI status does not apply to structural fires, motor vehicle incidents, or other emergency responses, which remain available year-round based on operational capacity.

Inter-Agency Cooperation & Emergency Support

Asterix the Long Firefighting Dog NPC believes that effective emergency response depends on cooperation, communication, and coordinated action between all stakeholders.

The organisation actively works alongside:

- Emergency services
- First responder networks
- Law enforcement structures
- Municipal stakeholders
- Fire Protection Associations
- Private emergency support organisations
- Aerial firefighting resources
- Community stakeholders

The NPC continues to expand its communication interoperability and operational partnerships to improve response efficiency and strengthen community safety throughout its operational area.

Operational Principles

Every emergency response undertaken by Asterix the Long Firefighting Dog NPC is guided by the following principles:

Safety First

The safety of our members, partner agencies, and the public remains our highest priority. No emergency response is worth risking unnecessary injury or loss of life.

Professionalism

We maintain high standards of training, discipline, operational readiness, and conduct in every deployment.

Integrity

We act honestly, ethically, and transparently in every aspect of our organisation and operations.

Interoperability

We believe effective emergency response depends on communication, cooperation, and mutual respect between all emergency stakeholders.

Continuous Improvement

Training, technology, equipment, and operational procedures are continually reviewed and improved to ensure the highest level of emergency support possible.

Community Service

As a registered Non-Profit Company, we exist to serve our communities through preparedness, emergency support, education, and responsible leadership.

Executive Leadership & Management Team

Jaco Rautenbach

Email: asterix@asterixfire.org

Mobile: 073 074 9716

Founder | Managing Director | Fire Chief

Operational Call Sign: PITBULL

Active First Responder | Incident Commander

SAESI Registered | Basic Life Support & First Aid Procedures | Aviation Radio Operator

Jaco founded Asterix the Long Firefighting Dog NPC and serves as its Managing Director and Fire Chief. He provides strategic leadership, operational command, and incident management while actively responding to fire and emergency incidents.

His responsibilities include command of structural, veld and forest firefighting operations, motor vehicle incident response, rescue-support operations, communications coordination, operational planning, training, and organisational development.

Jaco has completed comprehensive firefighting and incident management training, ranging from Firefighter Levels 1–3 through to FireBoss Levels 1 & 2, Incident Command and Management, Fire Risk Management, wildfire suppression, prescribed burning planning, Basic Life Support and First Aid Procedures, and holds an ICASA Aviation Radio Operator's Licence enabling air-to-ground and ground-to-air communication during emergency operations.

Ruchelle Rautenbach

Email: admin@asterixfire.org

Mobile: 079 143 0056

Director | Administration & Compliance

Active Operational Member | First Responder

SAESI Registered | Basic Life Support & First Aid Procedures

Ruchelle oversees the organisation's administration, governance, and compliance while serving as an active operational member. She responds alongside the Fire Chief during emergency incidents and plays a key role in first-response operations, documentation, public liaison, organisational management, and inter-agency coordination.

Her experience within the medical industry further strengthens the organisation's ability to provide Basic Life Support and first-responder assistance until ambulance services arrive.

Frans Lottering

Email: frans@asterixfire.org

Mobile: 079 629 9191

Director | Operations

Active Operational Member | Firefighter

Frans serves as Director of Operations and is an active firefighter and operational responder. He is responsible for supporting operational readiness, equipment management, responder safety, and day-to-day field operations.

Frans actively participates in structural, veld and forest firefighting, motor vehicle incident support, emergency deployments, and operational readiness while assisting with maintaining the organisation's high operational standards.

Jessica Lottering

Email: jessica@asterixfire.org

Mobile: 076 255 1110

Management | Administration & Compliance

Communications & Dispatch Operator

Jessica forms part of the organisation's management team and supports administration, compliance, organisational documentation, and communications. She assists with the operation of the Emergency Communications & Dispatch Centre, helping coordinate incidents, maintain operational records, and support day-to-day organisational activities.

Jennica Lottering

Email: admin@asterixfire.org

Mobile: 073 656 5299

Management | Administration & Compliance

Communications & Dispatch Operator

Jennica forms part of the organisation's management team and supports administration, compliance, communications, and dispatch operations. She assists with emergency communications, incident documentation, community engagement, and organisational administration while also serving as a communications and dispatch operator as part of the organisation's rotating dispatch roster.

Why Organisations Choose Asterix

Asterix the Long Firefighting Dog NPC has established itself as a trusted Fire & Emergency Support Organisation through a commitment to professionalism, training, interoperability, and continuous improvement.

The organisation is recognised for:

- Professional leadership and structured incident management
 - Trained operational personnel
 - Dedicated Emergency Communications & Dispatch Centre
 - Integrated communications through Halo Dual-Band PTT, VHF, Airband, iER, and OCC Limpopo
 - Dedicated First Responder status for AURA, iER, and NAMOLA
 - Professional-grade firefighting and emergency support equipment
 - Advanced operational technology and situational awareness systems
 - Strong inter-agency cooperation and communication
 - Community education and fire prevention initiatives
 - Continuous investment in training, equipment, and operational capability
-

Our Mission

To protect lives, property, and communities through fast, professional, and responsible response to fire, rescue-support, and emergency incidents, including structural fires, veld and forest fires, and motor vehicle incidents, while providing basic first-responder support and scene stabilisation until the appropriate emergency services arrive.

Our Vision

To be a trusted and respected Fire & Emergency Support and First Responder Organisation, strengthening the emergency response network through professionalism, cooperation, operational readiness, advanced communication capability, and an unwavering commitment to community safety.

Our Commitment

At Asterix the Long Firefighting Dog NPC, we recognise that emergencies demand professionalism, preparation, and teamwork.

Every emergency call entrusted to us is approached with integrity, discipline, respect, and an unwavering commitment to protecting lives, property, and the environment.

We remain committed to continuous improvement, responsible leadership, investment in our people and equipment, and working alongside fellow emergency services to strengthen emergency response throughout the communities we proudly serve.
